

FullerThaler Behavioral Unconstrained Equity Fund

"The crazy thing is thinking humans always act logically."

At an individual stock level, we search for events related to **insider activity**, **earnings surprises**, and other news that demonstrate investor misbehavior.

Our **over-reaction** strategy identifies situations where investors over-react to bad news and losses (e.g., panic). Our **under-reaction** strategy identifies situations where investors under-react to good news (e.g., not pay attention).

Over- and Under- reaction

...to historical, negative/positive information

Investment Objective

The Fund is a concentrated all-cap US equity mutual fund. As an "unconstrained" fund, its stock selection is driven by long-term capital appreciation potential.

Looks for companies with:

- significant insider buying or stock repurchases (over-reaction)
- significant earnings surprises (under-reaction)

Invests in domestic stocks with all market capitalizations.

Investment Process

Using principles of behavioral finance, the FullerThaler Behavioral Unconstrained Equity Fund capitalizes on the market's **over-reaction** to negative information regarding a company's future prospects and **under-reaction** to positive new information. The fund draws from FullerThaler's more than 30 years of experience in analyzing events that suggest investor misbehavior.

If behavioral biases are present in a stock, we then proceed to fundamental analysis of the company. If the company has solid fundamentals consistent with our long-term investment objectives, the Fund buys the stock.
